Access Drilling System
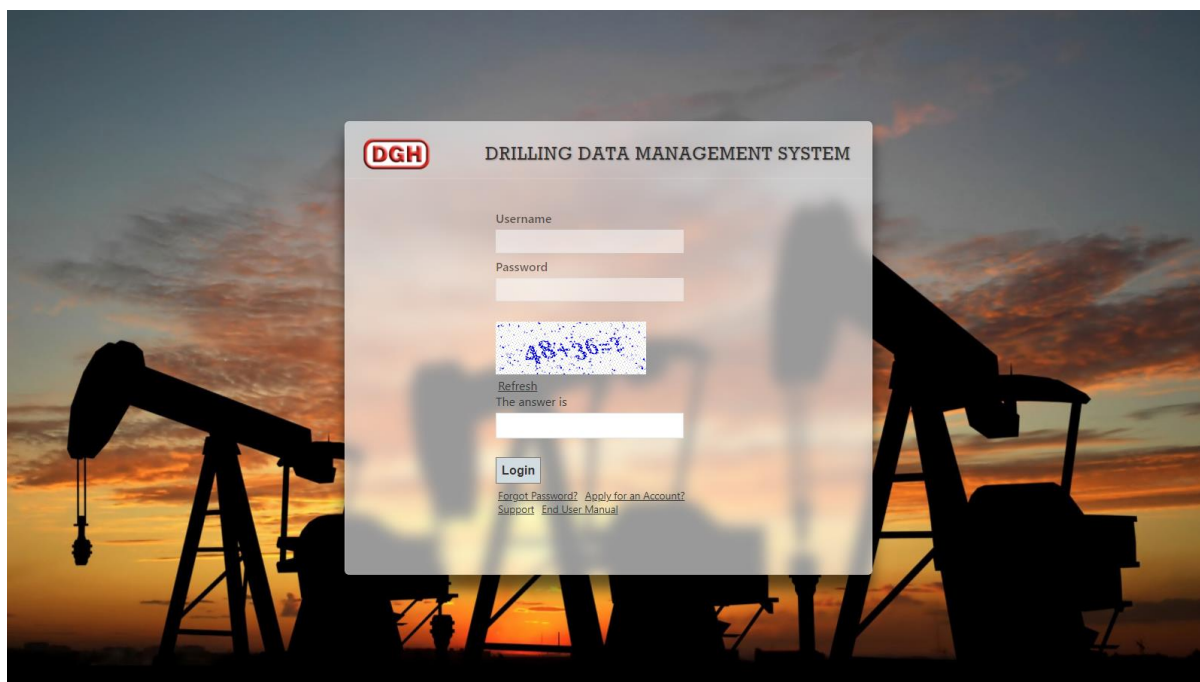

About Drilling System Application

Drilling System is a web based application hosted at DGH for online entry of Drilling Data. Please read carefully below the system requirements to run the Drilling System application.

How to access Drilling System Application

Recommended browsers: Google Chrome 36+, Mozilla Firefox 26+, Internet Explorer 10+.
It is recommended you update your browser to the latest version for the best experience.

- First you need to install the DGH Root CA certificate in your browser. You may download it by clicking here.

- The next step is to install the certificate you have downloaded. We have provided a manual for installing the certificate in your browser. Please download the Instruction Manual here and install the certificate.

- Once the certificate is installed, you may access the Drilling System Application. You will need to login with your Userid and Password. If you do not have valid login credentials, then you may need to register as a new user .
